## The statistics of the EoR 21-cm signal

Tuesday, 17 May 2016, 13:00  
Room A304

Simulations show that the Epoch of Reionization 21-cm signal becomes increasingly non-Gaussian as reionization proceeds. This affects the error predictions for the various experiments aimed at measuring the EoR 21-cm power spectrum. The talk shall present efforts to analyse and quantify these effects.
