

# PHYSICS AND THE CITY OF MUMBAI

An aerial photograph of Mumbai, India, showing the city's dense urban landscape, waterfront, and surrounding water bodies. The city is built on a narrow strip of land, with a large body of water to the west and east. The sky is blue with some clouds. The text "PHYSICS AND THE CITY OF MUMBAI" is overlaid on the top half of the image.

# Why “Minarets” ??

It acts as a *Lighthouse* ...

“**MINARET** (*manāra*), a tower, usually attached to a mosque, from which the muezzin (*mo`adden*) summons Muslims to prayer. In Arabic, *manāra* originally denotes a lighthouse or signaling tower at sea.”

# HORIZON

# Pythagoras' theorem

$$a^2 + b^2 = c^2$$

$$x^2 = (R + h)^2 - R^2$$

$$x = \sqrt{2Rh}$$

**For Minaret,  $h = 85 \text{ ft} = 25 \text{ m}$**

$$\sqrt{2Rh} = \sqrt{2 \times 6400 \times 25 \times 10^3}$$

$$= 10^3 \sqrt{2 \times 6.4 \times 25}$$

$$= 17.89 \text{ kms}$$

**For Human being,  $h = 6 \text{ ft} = 1.83 \text{ m}$**

$$\sqrt{2Rh} = \sqrt{2 \times 6400 \times 1.83 \times 10^3}$$

$$= 10^3 \sqrt{2 \times 6.4 \times 1.83}$$

$$= 4.84 \text{ kms} \approx 5 \text{ kms}$$

# A Comparison

## Mumbai History

- 1661: Portuguese Princess Catherine of Braganza brings Bom Bahia to King Charles II of England as part of her marriage dowry
- 1668/1669: British East India Company leased the seven islands of Mumbai from Charles II
- 1687: British East India Company transferred its headquarters from Surat to Mumbai. making it head of all the Company's holdings .
- 1802 Treaty of Bassein (Vasai)

## World Scientific History

- 1662: Robert Boyle: Boyle's law of ideal gas
- 1665: Philosophical Transactions of the Royal Society first peer reviewed scientific journal published.
- 1687: Newton: The publication of Newton's Principia, Law of motion, law of universal gravitation, basis for classical physics
- 1802 Thomas Young –definitive proof of the wave nature of light

# Geography

- Mumbai consists of **two** distinct regions:
  - i. **Mumbai City district (South Mumbai)** spans **67.79km<sup>2</sup> (26 sq mi)**
  - ii. **Mumbai Suburban district** spans **370 km<sup>2</sup> (143 sq mi)**
- Population of Mumbai: **18 million and growing!**
- Population Density: Approximate **40,000 persons per sq km**

# MUMBAI TRAINS

VIJAY SINGH MUMBAI  
PHYSICS APRIL2019

# First train from CST to Thane, April 16, 1853 (161 years ago)

- 34 kms
- 14 – coach steam engine
- Halting at Byculla & Sion and at another place to fill water for the engines
- Exactly 1 hr 15 mins journey

# 2014 – Today

- **Fast train:**  
45 mins & 4 halts  
(Byculla, Dadar, Kurla and Ghatkopar)
- **Slow train:**  
1 hour, 18 stations

KNOWING SOMEONE CLOSE SERIOUSLY HURT IN A RAILWAY ACCIDENT

The image shows two electric trains on parallel tracks. The train on the left is yellow and white with the number 951 on its front. The train on the right is also yellow and white with the number 226 on its front. Both trains have red and white vertical stripes on their sides. The background is filled with a complex network of overhead power lines and support structures. A blue sign with the number 12 is visible on one of the support structures. The scene is set in an open area, possibly a railway yard or a station, with a clear sky.

What is the speed of a Fast Train ?

Approximately  $90 \text{ km/h} = 25 \text{ m/s}$

If you fall as far as 100 m in front of the train while crossing the track, can you be saved?

200 m ?

300 m ?

400 m ?

500 m ?

Max. de-acceleration =  $-0.5\text{m/s}^2$

$$v^2 = u^2 + 2as$$

$$v = 0$$

$$u = 25$$

$$a = -0.5$$

$$s = -\frac{u^2}{2a} = +\frac{25 \times 25}{2 \times 0.5} = 625 > \text{half a kilometre !}$$

m !

And you haven't even considered the driver's reaction time.

Reaction time = Approx. 2 sec

$$s_1 = 2 \times 25 = 50 \text{ m}$$

$$s + s_1 = 675 \text{ m}$$

**NEVER EVER CROSS THE RAILWAY TRACKS !!**

# BERNOULLI'S PRINCIPLE

Standing near the tracks !

Is it safe ? **NO !!**

Why? One reason is from a **Law of Fluid Mechanics.**

# People standing near moving train track

August 18 2018 7:18 pm, Thane Station

## Hameed Jewal's Fatal De-boarding from a Local Train

*Hameed Jewal was from Bangla Desh  
– far, far away from HOME*

# ALIGHTING FROM A MOVING TRAIN

$v = \text{slow } 7 \text{ kmph} = 2 \text{ m/s}$  and  $w = 90^\circ/\text{s}$

$$\frac{ml^2w}{3} \qquad \frac{mvl}{2}$$

$$w = 3v/2l$$

**Back of head comes crashing down in 1 second !**

**Less Dangerous but still  
NOT RECOMMENDED !!!**

VIJAY SINGH MUMBAI PHYSICS

GETTING WET AT LEAST ONCE EVERY MONSOON

# Mumbai Rains

# Some were trapped inside their cars. Let us understand how.

$$\begin{aligned}\text{Average Pressure exerted by water on the car door} &= \frac{\rho g h}{2} \\ &= 5000 \text{ Pa}\end{aligned}$$

$$\begin{aligned}\text{Force on the car door by water} &= \text{Pressure} \times \text{Area} \\ &= 5000 \times 1 \text{ m}^2 \\ &= 5000 \text{ N}\end{aligned}$$

And, you can exert about 1000 N from inside (Body mass  $\times$  g).

*So you are trapped !*

Why is the Mumbai sea-shore so popular?

## CONVECTIVE COOLING

## Law of Convection

Heat is generated in the body due to metabolism and needs to be disposed off.

$$\frac{\Delta Q}{\Delta t} = K_c A_c (T_s - T_L)$$

$\frac{\Delta Q}{\Delta t}$  = the heat energy ( $\Delta Q$ ) transported in time ( $\Delta t$ )

$A_c$  = exposed body area

$T_s$  = skin temperature ( $37^\circ\text{C}$ )

$T_L$  = atmosphere ( $33^\circ\text{C}$ )

$K_c$  = constant for convective cooling =  $5 \text{ Kcal/m}^2\text{hr}$

A body surface area =  $1.5 \text{ m}^2$

$$A_c = \frac{2}{3} A = 1 \text{ m}^2$$

$$\frac{\Delta Q}{\Delta t} = 5 \times 1 \times 4 = 20 \text{ Kcal/hr}$$

Body generates 100 Kcal/hr

$$\text{So, } 100 - 20 = 80 \quad \textbf{Excess Heat ? !}$$

Now, even if a wind of 3 m/sec is blowing,

$$v = 3 \text{ m/sec}$$

$$\text{then, } K_c \neq 5, = 20 \text{ Kcal/m}^2$$

$$\therefore \frac{\Delta Q}{\Delta t} = 80 \text{ Kcal/hr}$$

This suffices and is akin to  
Outside temperature being more like  $20^\circ\text{C}$  and not  $35^\circ\text{C}$  !

*...we look at one of the oldest*

# Colaba Observatory

Built in 1826

Magnetic Observatory,  
Colaba

# TRAMS

VIJAY SINGH MUMBAI PHYSICS APRIL 2019

Tourist bus

Single compartment tram

Three compartment tram

Double decker tram

# DID YOU KNOW ?

- The **British introduced trams** in Mumbai during **1864-1873**
- First tram begun between **Parel** and **Colaba** on **9 May 1874**
- It was drawn by **6 to 8 horses**
- **Electrified** tram service was proposed in **1900**.  
But objections delayed them till **1907**. *What were the objections?*
- **Double-deck** tram service began in **September 1920**
- Tram service closed on **31 March 1964**

# And... there was a clash between these two institutions !

- The electric tram would cause **electromagnetic noise**. This noise would interfere with geo-magnetic recording.
- How ? We learn from Ampere's Law (1826).

Current = 20 Ampere

$$B(r) = \frac{\mu I}{2\pi r} = 2 \times 10^{-7} \times \frac{I}{r} = \frac{2 \times 10^{-7} \times 20}{100} = 4 \times 10^{-8} T = 0.0004 G$$

Magnetic Field of Earth at Mumbai = 3.1000G

Therefore, noise =  $\pm 0.0004$  G

- And hence, trams were not allowed in the Colaba region until the observatory shifted to Alibag.

Magnetic observatory,  
Alibaug

# ***MYSTERY***

## **MISSING MUMBAI'S MILESTONES**

- These basalt stones, originally three or four feet tall, mark miles from St Thomas's Church (today St Thomas's Cathedral) which, in the eighteenth century, comprised the city-centre.
- It cites inscription, location, landmark, date and remarks on the condition of each stone.
- Only six of 13 (or 15? Or 16?) stones mentioned, all Grade 1 heritage structures, have been located. Some have allegedly been removed, submerged or demolished by none other than road labourers hired by the BMC itself.

**INSCRIPTION:** 1 Mile From St Thomas's Church  
**LOCATION:** Kalbadevi Road, in front of Navlakhi  
**Date:** 1816-37

**INSCRIPTION:** 3 Miles From St Thomas's Cathedral  
**LOCATION:** August Kranti Marg, in front of Central Bank, Gowalia Tank Branch  
**DATE:** After 1837

**INSCRIPTION:** 3Miles From St Thomas's Church  
**LOCATION:** Javji Dadaji Marg, opposite BHATIA HOSPITAL  
**DATE:** 1816-37
