"Transforming the Future: Women in Physics at the University of Kinshasa"

Elvire Banza Ling (Physicist and computer Scientist) Prof. Assistant, Rosalie Mutala Banza Student in Physics & Rachel Ntumba Physics Student

We can observe a significant difference and a remarkable change in the Physics Department of the University of Kinshasa.

- Women are now actively pursuing physics, marking a notable shift compared to previous years.
- Our determination was to educate and inspire the youth in engineering, mathematics, and physics.
- Through workshops, conferences, and discussions, we elucidated the impact of physics on society.

- Physics offers diverse opportunities in collaboration with engineers, mathematicians, and the medical field.
- When you pursue your scientific path with determination, you can define your desired future.

"Every breakthrough in science starts with a question, and every question starts with curiosity."

-University of Kinshasa

- We are immensely grateful for the presence of women in the Physics Department.
- We remain committed to organizing scientific conferences and workshops to inspire and encourage women and young individuals in physics.
