# Whispering gallery Modes in Light Waves

Eigenmodes of circular cavities which get excited when a light beam gets trapped due to a series of total internal reflections and after orbiting the cavity, it returns to its starting point in phase.

# Features of WGMS

• High Quality factor

 $Q = \frac{\text{Energy stored}}{\text{Energy Dissipated per cycle}}$ 

Very Small mode volume

# Features of WGMS

High Quality factor

Very Small mode volume

- These factors lead to enhanced field amplitude and a long photon lifetime.
- **Physics and Applications:** CQED, Non-linear optics, Microlasers, Temperature, Pressure, Refractive index, Humidity and Bio Sensors.
