'A stunning tapestry of post-independent India's story of research in science and engineering.'

N.R. Narayana Murthy, co-founder of Infosys

'An inspiring, page-turning, must-read book for one and all.'

Kiran Karnik, former chairman, Nasscom

'A riveting narrative about the trying circumstances in which people worked and built Indian science after Independence.'

Vijay Kelkar, economist and former finance secretary,
Government of India

'Celebrates and inspires India's aspirations to lead in science and technology.'

Kiran Mazumdar Shaw, chairperson, Biocon

'Required reading for those who want to understand the way India developed as a knowledge society.'

Nandan Nilekani, chairman and co-founder, Infosys

'My late colleague Prof. Bracewell often referred to Govind Swarup as Stanford's biggest gift to India. I now understand why.'

Arogyaswami Paulraj, professor emeritus, Stanford University

SPACE. LIFE. MATTER.
HARI PULAKKAT

SPACE LIFE MATTER

The Coming of Age of
Indian Science

HARI PULAKKAT

How do you build a scientifically and technologically strong modern nation with limited means and resources? Indian scientists faced this challenge seven decades ago when the country became independent and confronted a world rapidly advancing in science and technology. In the years that followed, they battled poor funding and archaic regulations to build India's science infrastructure from scratch. This fascinating narrative captures the story of the struggles and triumphs of these leaders of science and the world-class institutions they founded.

From the cosmic-ray experiments at the Kolar Gold Fields to ISRO's stunning space observatory built under severe constraints, from the construction of one of the world's largest radio telescopes in Ooty to the development of structural biology at IISc and, most recently, the significant contributions of the country's scientific institutions towards tackling a global pandemic – *Space. Life. Matter.* brings to readers the path-breaking advances made by India's scientists to original research and what they mean to the nation's progress.

Deeply informed, enlightening and inspiring, this singular, comprehensive account of the pride of place that Indian science occupies in the world is essential reading for all.
