

Testing of SiPMs and scintillators for the CMVD

DHEP Annual Meeting

May 6, 2022

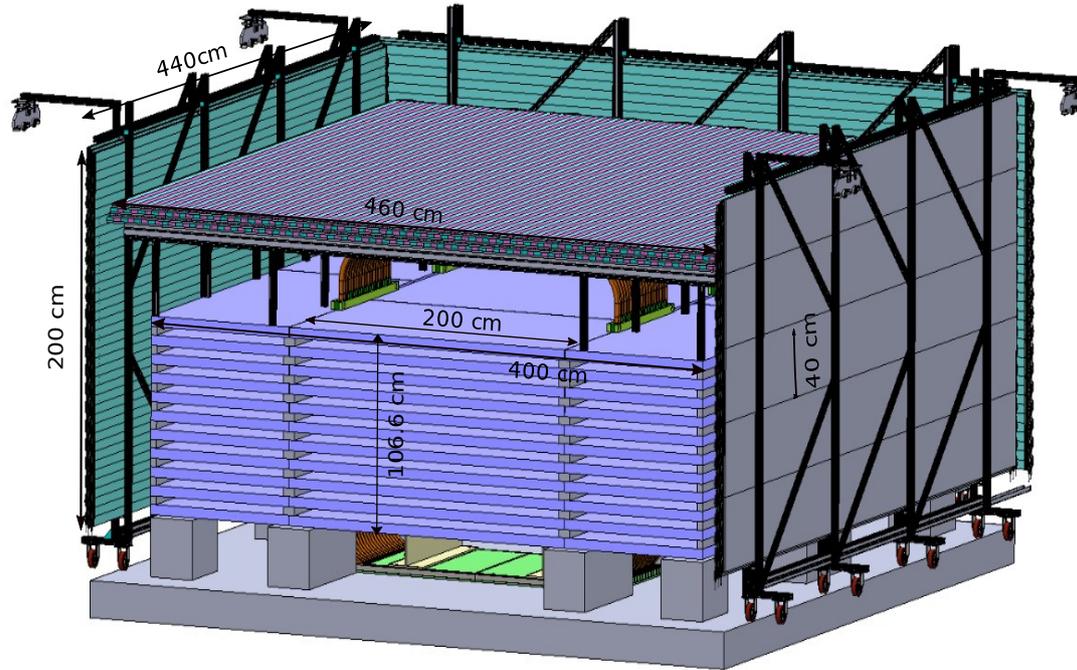

Mamta Jangra

On behalf of INO Group

- Motivation
- SiPM mass testing
- Scintillator testing
- Summary

Motivation : Cosmic Muon Veto Detector

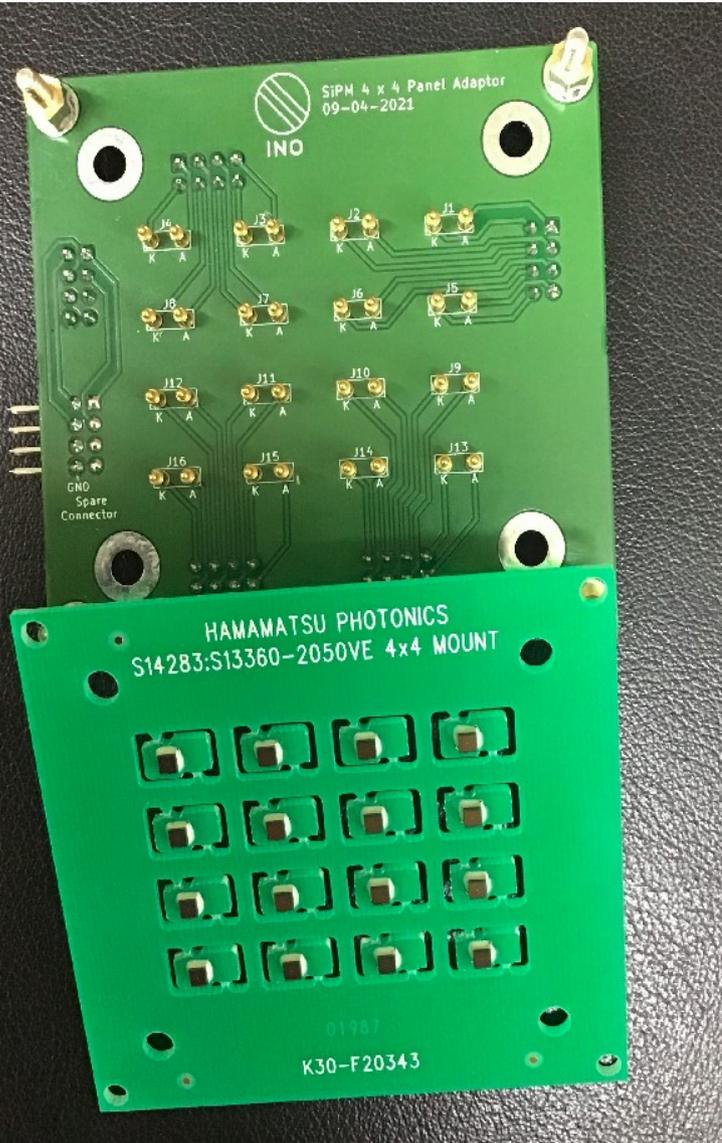

- CMVD with veto efficiency more than 99.99%
- 720 extruded scintillator strip (counter)
- 2848 Silicon-PhotoMultipliers (SiPMs)

Outline

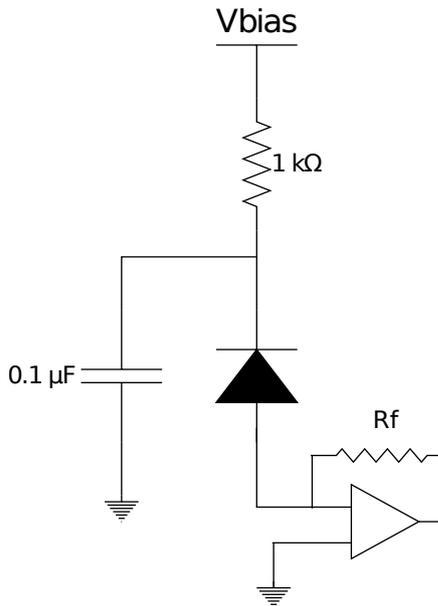

- Motivation
- **SiPM mass testing**
- Scintillator testing
- Summary

About SiPM

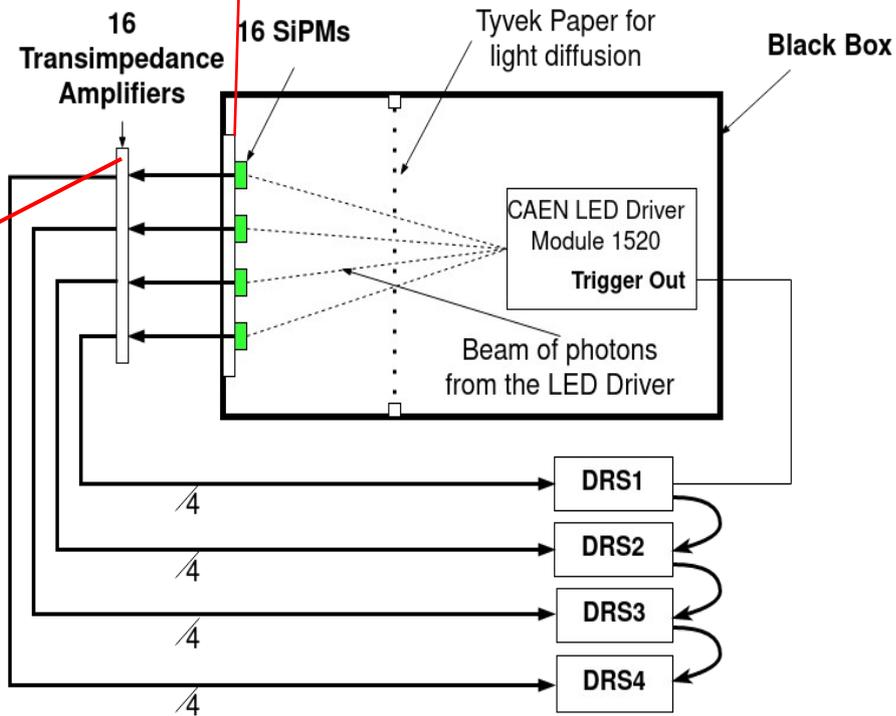

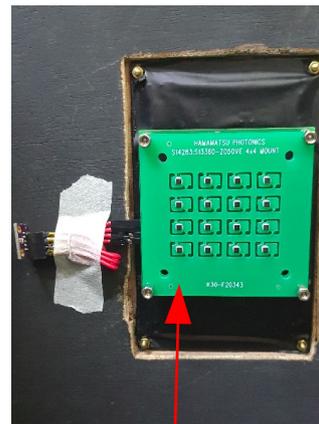

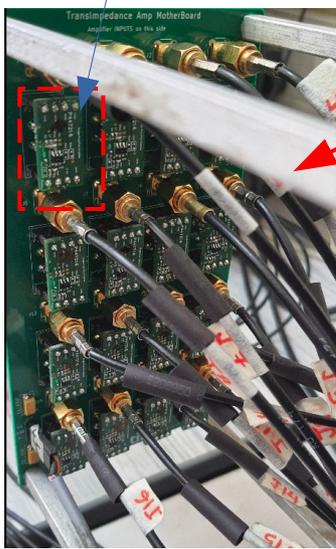

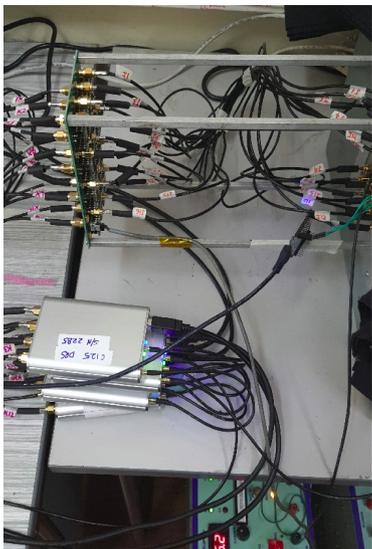

- S13360-2050VE Hamamatsu
- 2mm x 2mm with 1584 pixels, microcell of 50 μm pitch, fill factor of 74%
- Overvoltage (V_{ov}) = $V_{\text{bias}} - V_{\text{bd}}$,
 V_{bd} : $(53 \pm 5)\text{V}$
- Spectral range : 320 - 900 nm

SiPM Mass Testing : Experimental setup

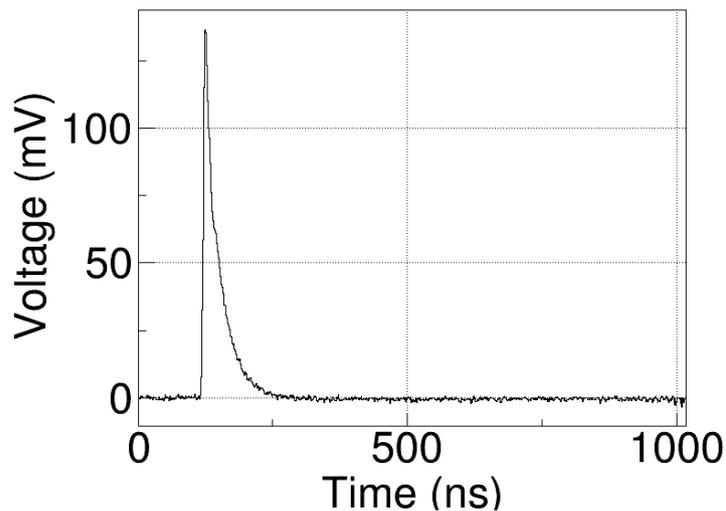

TI amplifier designed by HAGR group

DRS: Waveform Sampler

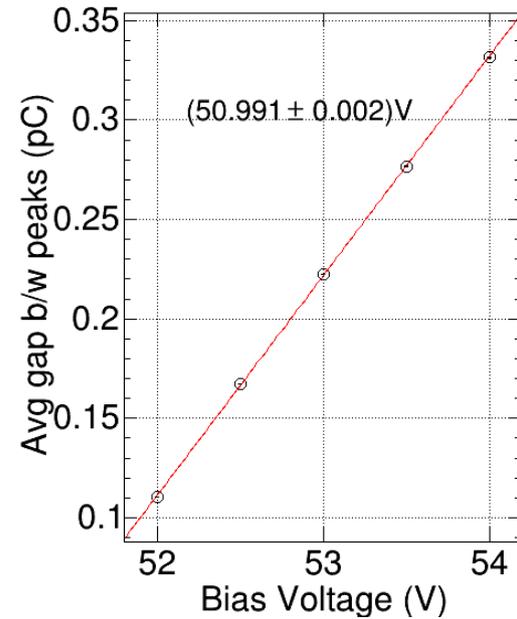

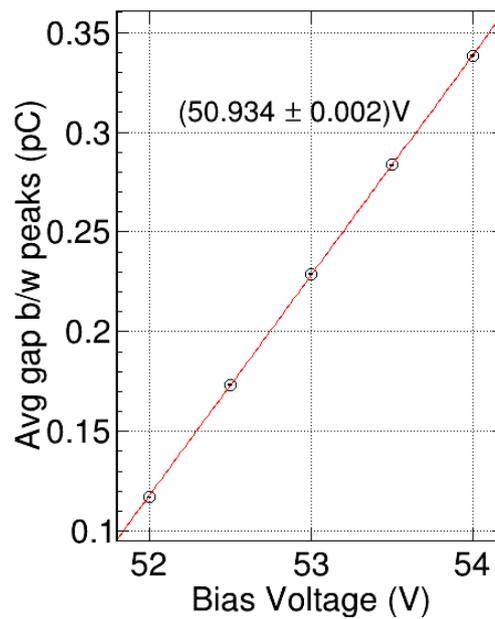

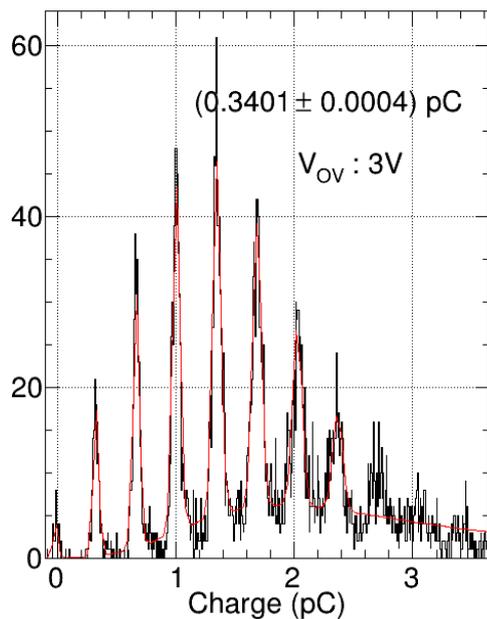

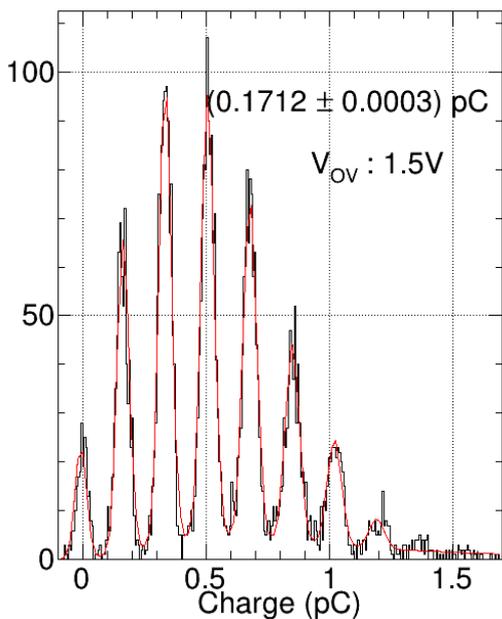

SiPM Testing Results

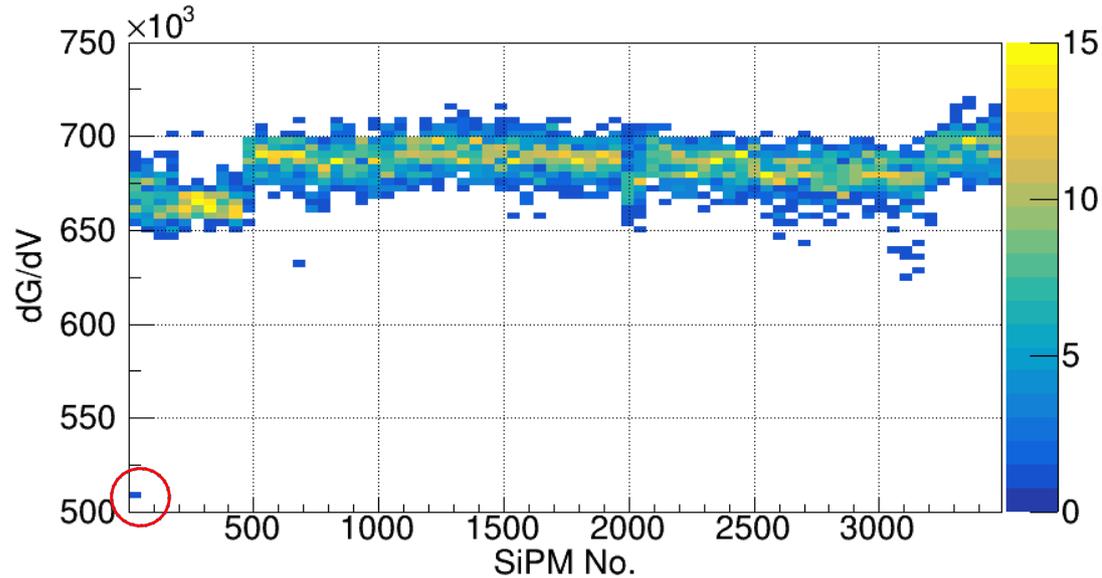

- A total of 218 panels were tested.
- Each panel has 16 SiPMs.
- Total 3488 SiPMs were tested.

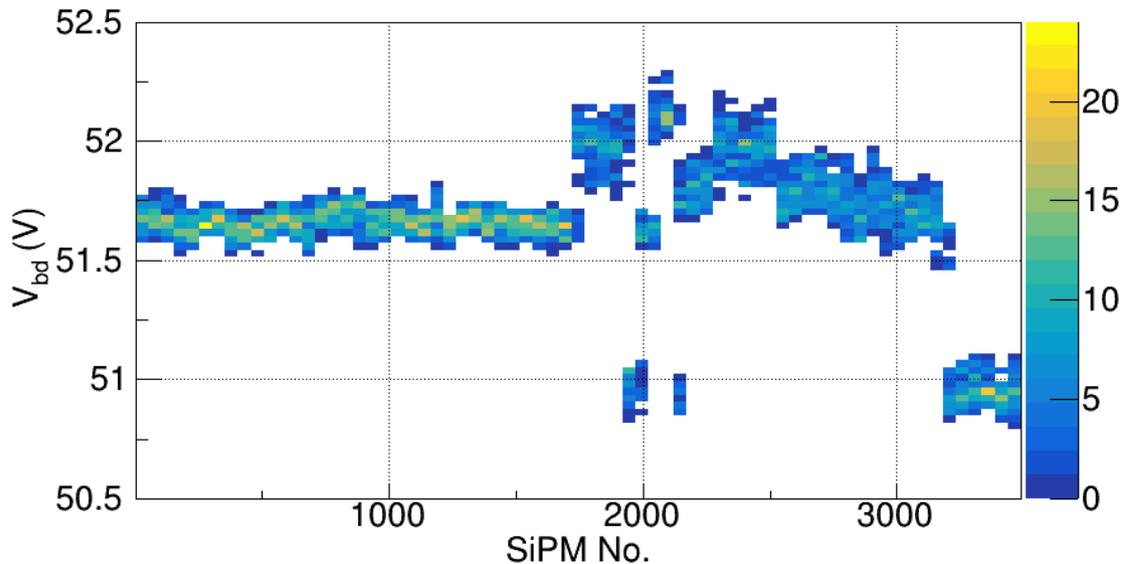

$$f(q) = Landau(q) + \sum_{n=0}^{N-1} R_n \times \exp\left(-\frac{(q - n \cdot \mu)^2}{2\sigma^2}\right)$$

Summary from SiPM Testing Results

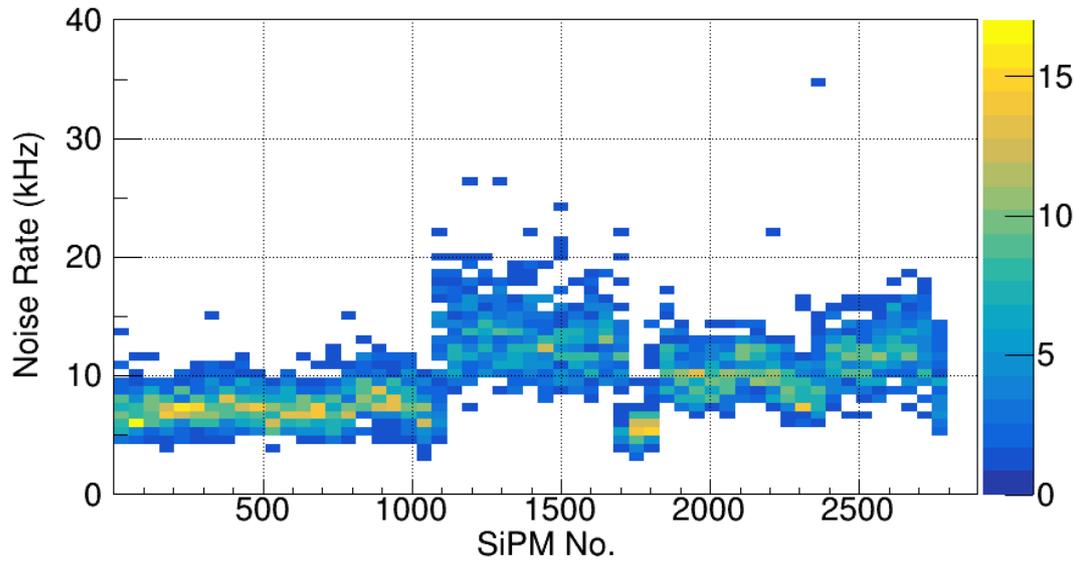

- Out of total 3488 SiPMs, one SiPM is found to be bad and one SiPM has low gain.

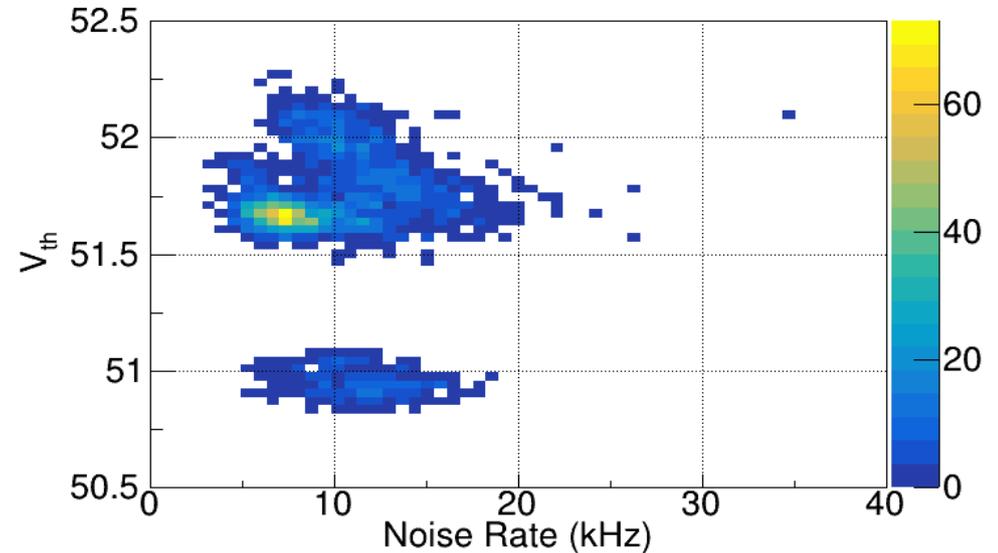

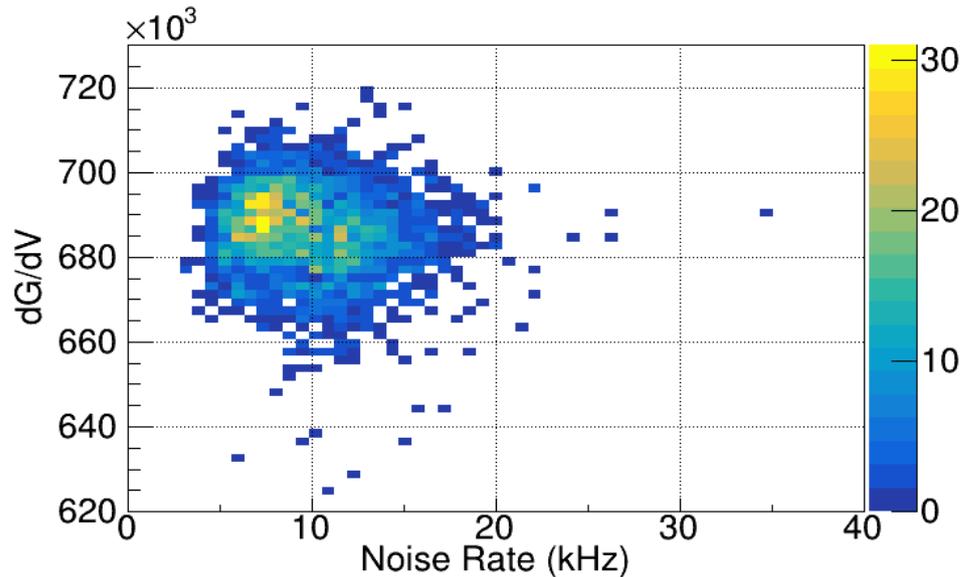

- A total of 3 sets of values are obtained for breakdown point of the SiPM.

Summary from SiPM Testing Results

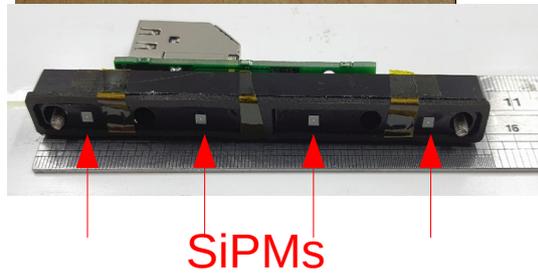

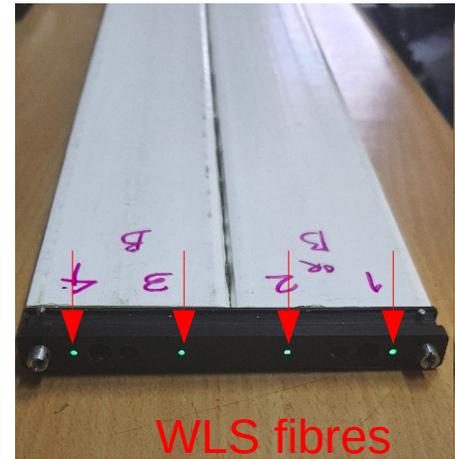

- $1\text{pe} = 0.32 \text{ pC} @ V_{\text{ov}} = 3\text{V}$, the noise rates are calculated at 0.48 pC .
- No correlation is found b/w noise rates and other parameters.

Outline

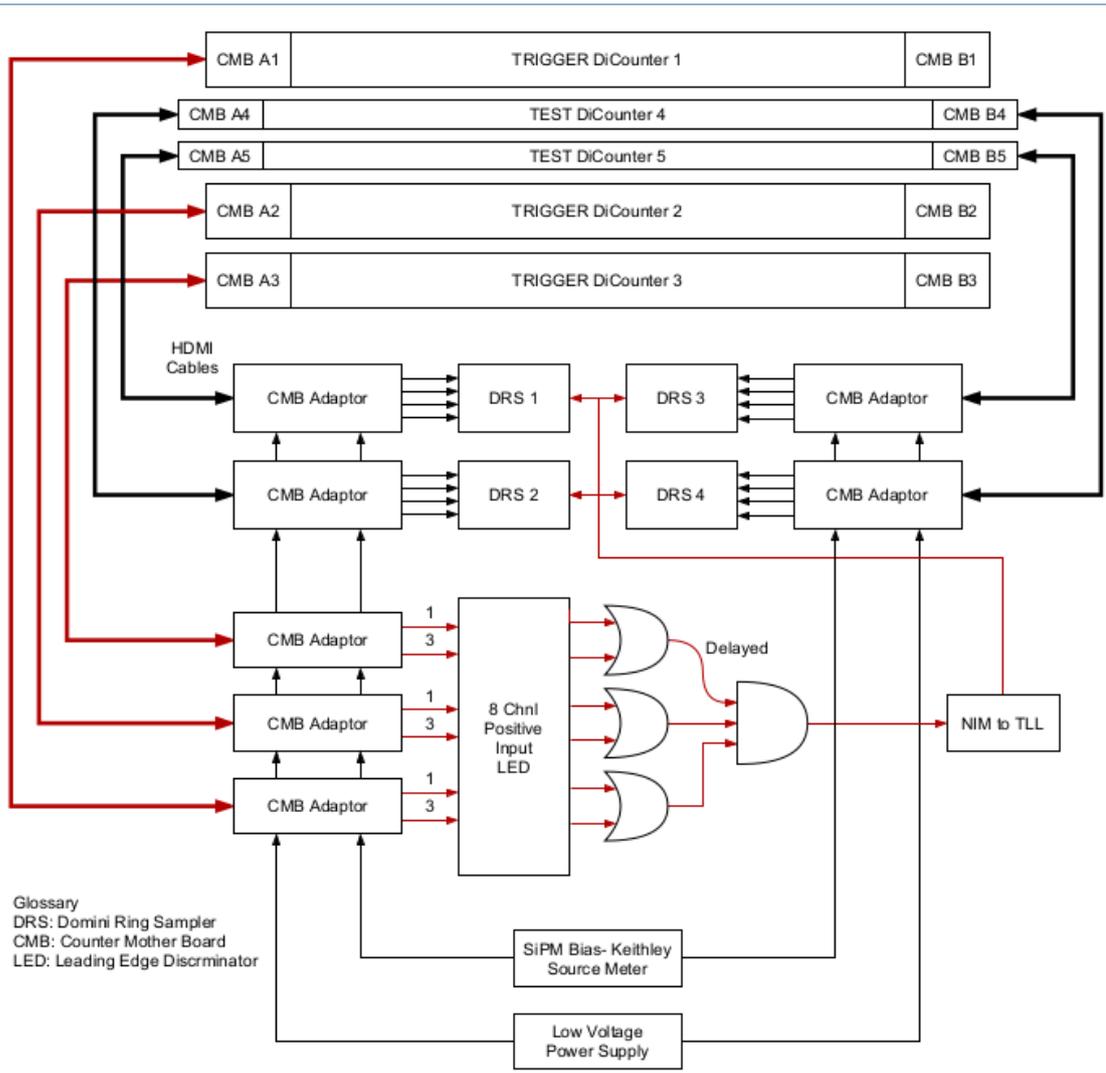

- Motivation
- SiPM mass testing
- **Scintillator testing**
- Summary

Di-counter Testing : Experimental setup

- 2 di-counters were tested at a time
- 3 di-counters were used for trigger generation

Di-counter Testing : Cosmic Muon Trigger Formation

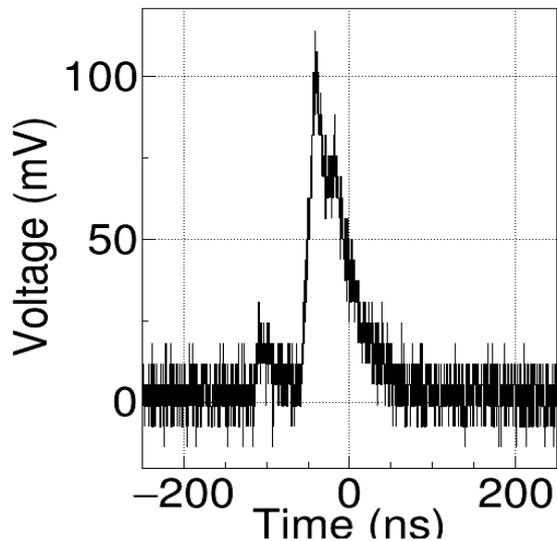

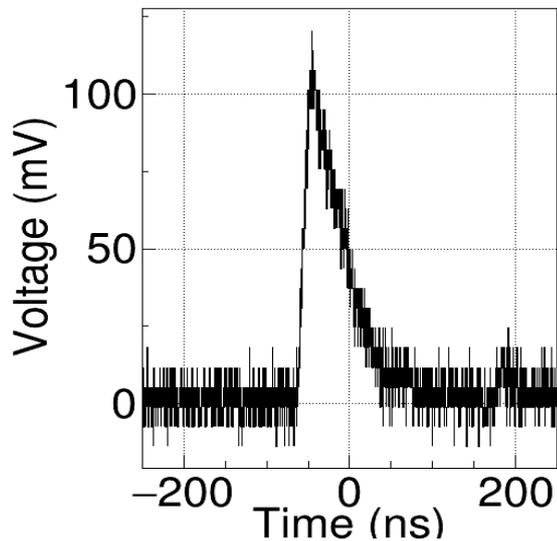

DiCounter Test Setup Using Cosmic Muon Trigger

Glossary
 DRS: Domini Ring Sampler
 CMB: Counter Mother Board
 LED: Leading Edge Discriminator

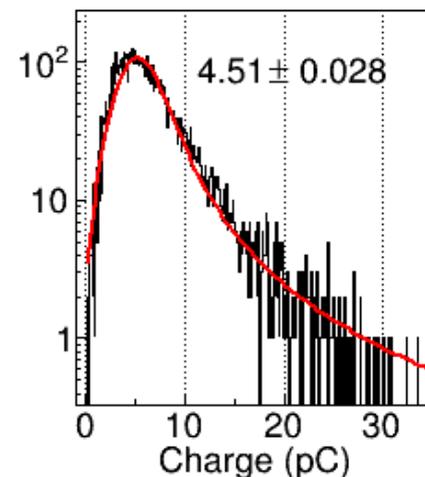

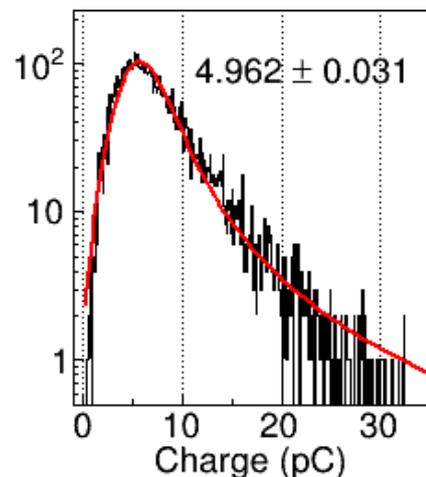

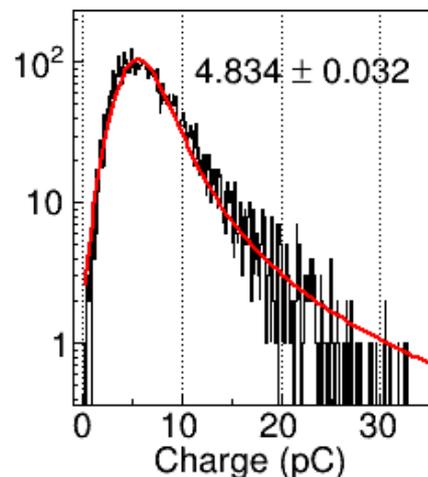

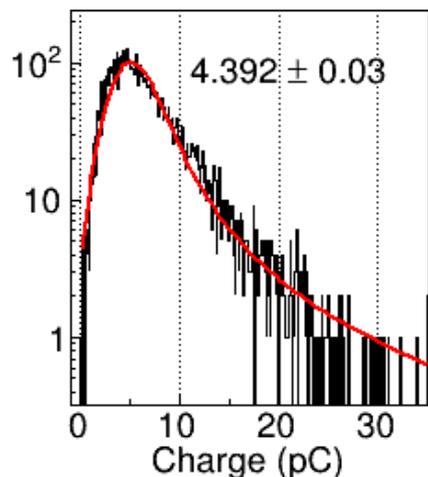

A1	714A	714B	B1
A2			B2
A3	713A	713B	B3
A4			B4

- A total of 3 di-counters are used for trigger.
- Trigger is generated only from one side of the di-counter.
- A1 and A3 channels i.e. one channel from each counter is used for trigger generation.
- Final trigger is generated by making $AND(OR(A1,A3),.....)$.

Scintillator Testing Results

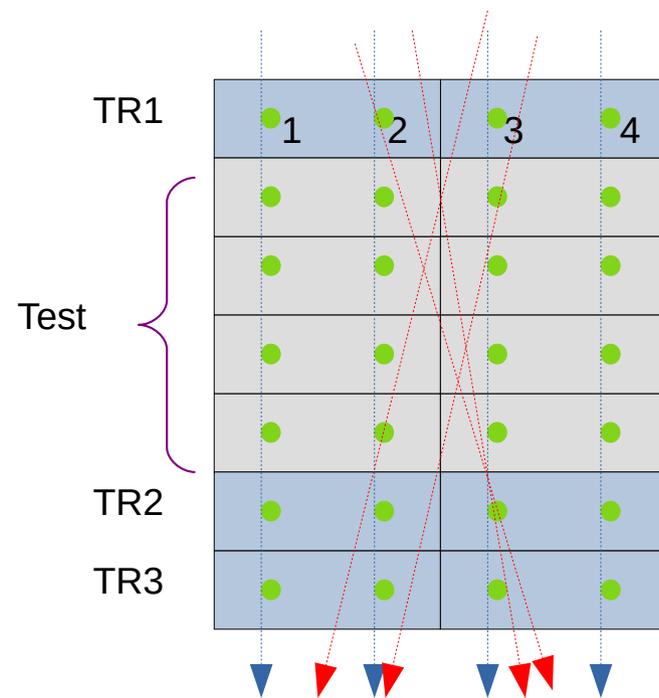

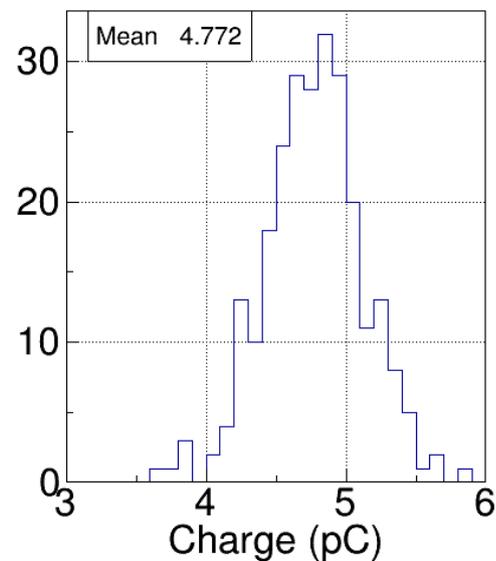

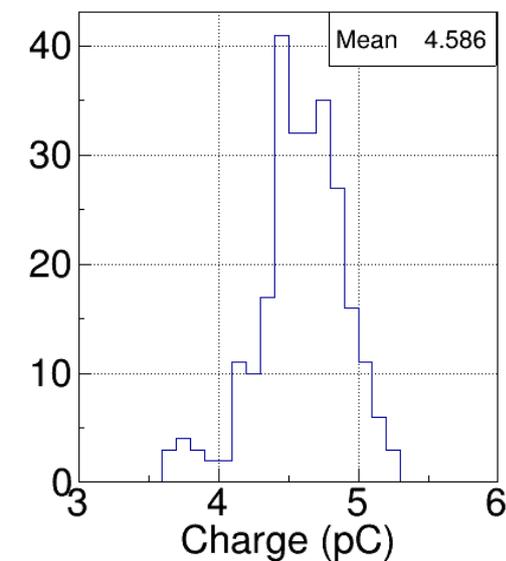

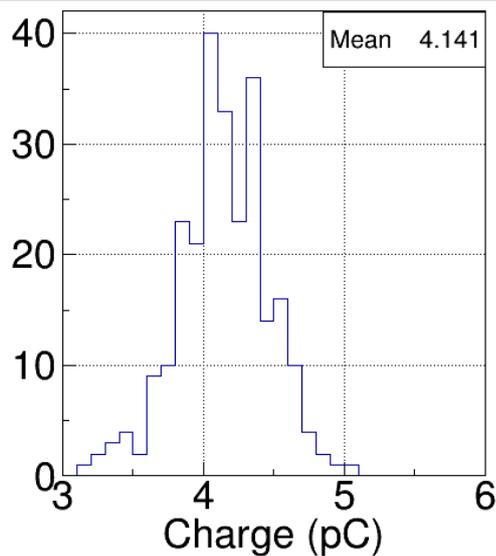

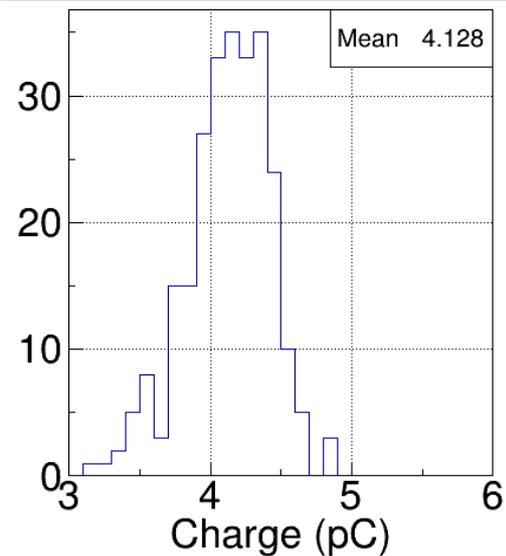

Cosmic
muon
signals

Muon charge distribution for 4 SiPMs of one side of the di-counter

Scintillator Testing Results

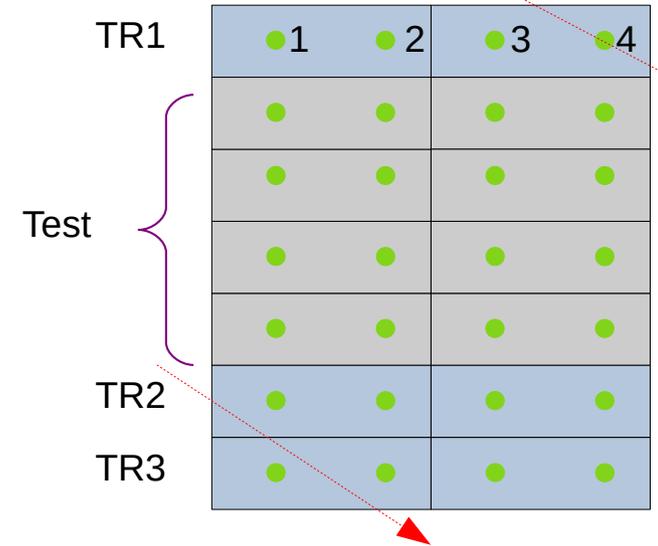

- The middle SiPMs of the dicounter have more charge collection as compared to the SiPMs on the edges.

Scintillator Testing Results

Around 1% inefficiency was observed with this geometry.

2 test dicounters were sandwiched b/w 3 trigger dicounters, inefficiency reduced to less than 0.3%

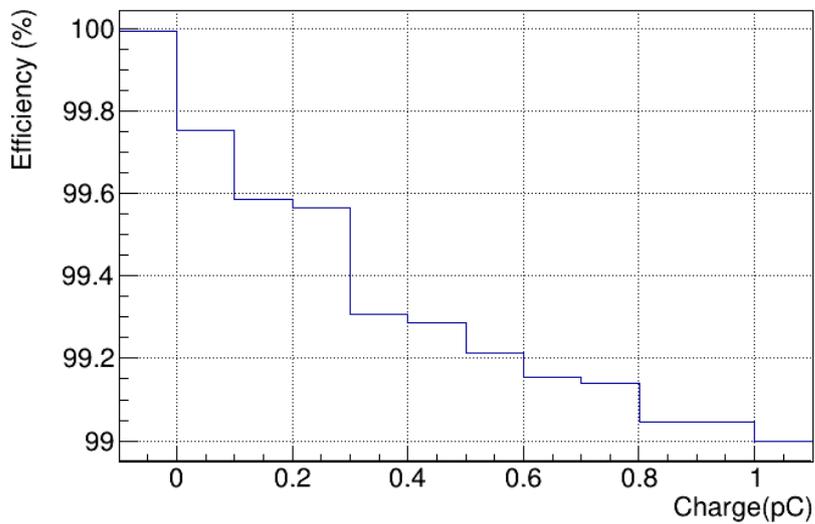

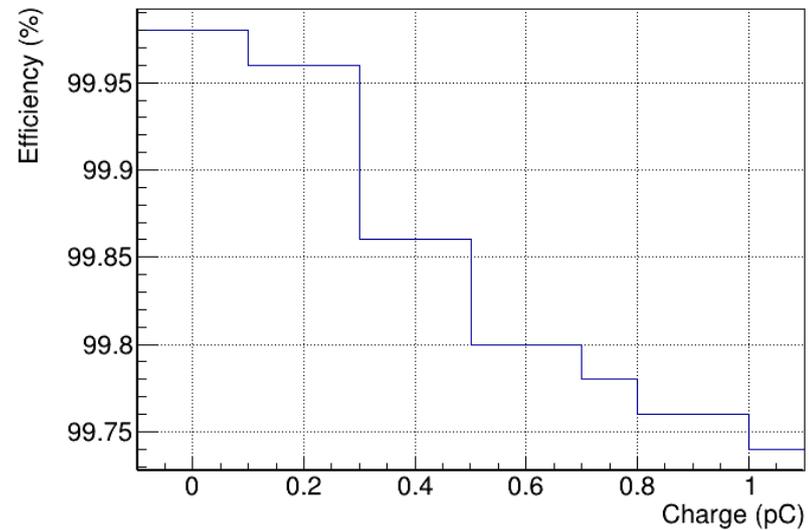

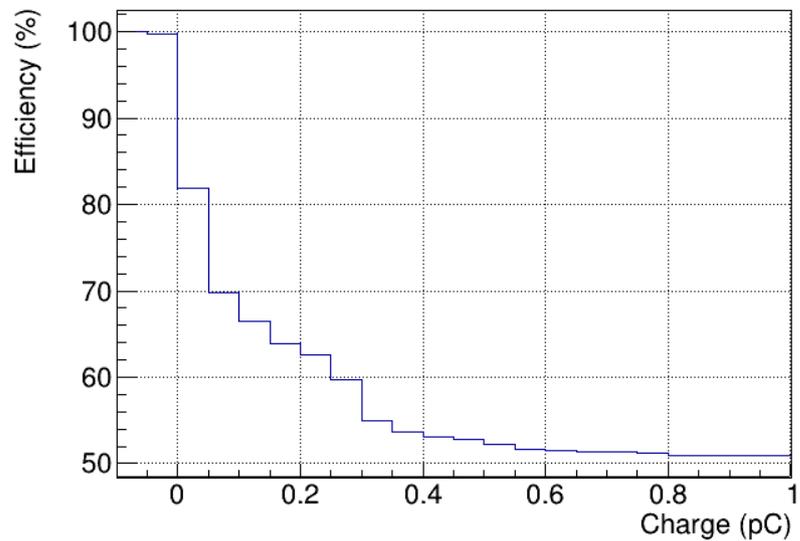

Di-counter Testing : Summary

Tested so far				Required
4.5 m	4.6 m	4.7 m	Total	
86	120	61	267	356

All the tested dicounters passed cosmic test except one, but reused later.

THANK YOU
